As part of this TMA, LandUseUSA | Urban Strategies has been engaged to conduct a Residential Target Market Analysis for Marquette County overall, plus each of eight communities that contributed funds to the initiative. The analytic results for all of these places are intentionally combined into shared documents to encourage discussion among ambassadors and stakeholders for those contributing communities.

Comparing the results between these places also provides regional perspectives that might otherwise be overlooked if each was reviewed in isolation. The county and eight communities are listed on the following page.

<i>Market Potential</i> <i>(Document 01)</i>	<i>Geography and Place</i>
Section 1-B	Marquette County
Section 1-C	The City of Marquette
Section 1-D	Trowbridge Park CDP
Section 1-E	Harvey CDP
Section 1-F	West Ishpeming CDP
Section 1-G	The City of Ishpeming
Section 1-H	The City of Negaunee
Section 1-I	K. I. Sawyer AFB CDP
Section 1-J	Gwinn CDP

This narrative focuses on the Real Estate Analysis (Document 02), which complements the Housing Market Analysis (Document 01) and is supplemented by a separate Demographic Analysis (Document 03).

<i>Three Documents</i>	<i>Short Description</i>
01 Housing Market Analysis	Residential TMA
02 Real Estate Analysis	Prices per Square Foot
03 Demographic Analysis	Market Parameters

All three of the analyses have been prepared by Sharon Woods, President of LandUseUSA | Urban Strategies. The firm was founded in 2008 in the Greater Lansing Metropolitan Area, which also is home to the state's capital, department of treasury, land bank authority, economic development corporation (MEDC), housing and development authority (MSHDA), and community and economic development association (CEDAM). LandUseUSA's contact information is provided below:

Introduction

This Real Estate Analysis for Marquette County mostly is based on recently sold housing units, recently advertised for-lease units, and short-term rentals. The data on recently sold units reflects Multiple Listing Service (MLS) data generously contributed by Stephanie Jones, a local Realtor with Select Realty. More specifically, Stephanie contributed the data for Marquette and Chocolay Townships, and the cities of Ishpeming and Negaunee.

The data on for-sale units in the City of Marquette and recently advertised for-lease units for the region was garnered from extensive field work and phone surveys by LandUseUSA in mid-2023. Finally, the data on short-term rentals is based on Airbnb listings and availability of choices in the upcoming June 2024 peak summer season.

The Real Estate Analysis differentiates existing housing choices based on the following attributes:

Data Attributes

- d) Geography: cities, and townships
- b) Era that units were built
- c) Year unit sold: 2022 and 2023
- d) Building format: attached and detached
- e) Number of bedrooms

Scatter plots are provided to demonstrate the relationship between unit sizes in square feet, and the reported sold price or advertised monthly contract (cash or net) rent per square foot. Each dot on the scatter plots represents a single residential unit.

Regardless of data attribute, there usually is an inverse logarithmic relationship between price per square foot (\$/psf) and available square feet. Smaller units usually command higher rents per square foot than larger units. However, the relationship is weaker among detached for-sale choices because many other variables erode the relationship – especially the age, condition, and location of choices.

Developers interested in pursuing new-build and rehab project in Marquette County can use the scatter plots to deduce optimal unit sizes relative to total prices. They might be tempted to super-size the new units to capture higher total rents and build fewer kitchens and bathrooms. However, a larger number of smaller units can actually be more productive and efficient, which could offset the expense of building additional kitchens and bathrooms.

For example, imagine that on a small parcel, a developer could build either a duplex with two large units, or a triplex with three smaller units. In general, the optimal market strategy would recommend the triplex rather than the duplex – even if that means paying for three utility hookups, kitchens, and more bathrooms. In theory, three units with higher prices per square foot should be more profitable than only two units with lower prices per square foot.

Also, smaller units usually are absorbed faster, which can help save time and money while meeting the needs of lower income households. Additional observations from the Real Estate Analysis are provided in the following pages of this narrative report.

Recently Sold Housing Units

Section 2-B

The data for the City of Marquette represents advertised for-sale prices in the third quarter of 2024 (July, August, September). In comparison, the data for the other places (Marquette Twp, Ishpeming, West Ishpeming, Negaunee, Chocolay Twp, and Sands Twp) represents actual sold prices, with a more complete sampling over the entire year in 2022 and 2023. Therefore, the data for the City of Marquette is not quite comparable to the other places.

With that caveat, it nevertheless is evident that the prices per square foot in the City of Marquette are higher than the other places. Prices per square generally are most moderate in the City of Negaunee, a little higher in Chocolay Township, and higher yet in the City of Ishpeming.

Recently sold and advertised units that were built in the year 2000 or later tend to have significantly higher prices per square foot than older units. Also, among units built in the past two decades, there is a clear relationship between unit size and price per square foot, with larger units being less efficient than smaller units.

Most of the attached units have significantly lower prices per square foot than the detached houses. The exceptions tend to be located within the City of Marquette, and include townhouses along Front Street and Lakeshore Boulevard, with vista views of Lake Superior.

In general, units with more than 1,200 square feet tend to have at least two bedrooms; units with 2,000 square feet of space usually have three or more bedrooms; and units with more than 2,900 square feet are more likely to have four or five bedrooms. Again, these relationships can be used as guidelines to help developers and builders identify the appropriate number of bedrooms for various unit sizes within each unique project.

Advertised For-Lease Housing Units

Section 2-C

The data for all geographies represents for-lease prices over a few months, and only in the year 2023. Therefore, the data for the City of Marquette is more directly comparable to the other seven places. More than half of the for-lease units in the study area are located in the City of Marquette, and less than half are located in Ishpeming, Negaunee, or other places in the county.

The for-lease units in the City of Marquette are more likely to be less than 600 square feet in size; those small units were built after the year 2000; and they are more likely to have exceptionally high rents per square foot. The City of Marquette also has a few available units with about 1,000 square feet and exceptionally high rents per square foot – and they too were built after 2000.

Overall, the number of choices seems low compared to the size of Marquette County. Most of the available for-lease units were attached formats, and there were very few detached houses, cottages, or mobile homes available for-lease at the time of this study. Overall, the results reinforce earlier observations that there is a need for more for-lease choices across a range of formats, including detached cottages and accessory dwellings as well as lofts, apartment buildings, and walkups.

Advertised Short-Term Rentals

Section 2-D

The Real Estate Analysis for Marquette County includes a study of advertised short-term rentals that are available for the peak summer season, and specifically for the month of June 2024. Also, it should be noted that short-term rentals are nearly always advertised based on the number of bedrooms, rather than the unit size in square feet.

Based on the data results, the monthly rents for short-term rentals tend to be higher in the City of Marquette than the other places. In general, a one-bedroom unit could capture rents of \$6,000 per month; and a larger unit could have rents exceeding \$10,000 per month. It is rare for short-term rentals to capture more than \$12,000 per month, regardless of the number of bedrooms.

The monthly rent per bedroom tends to decline with an increase in the total number of bedrooms. In other words, units with only one bedroom are more efficient than units with two bedrooms; and units with three bedrooms are more efficient than those with four bedrooms.

Regardless of the observations described above, the fact remains that short-term rentals can capture exceptionally high rents compared to twelve-month leases. They also tend to be fully furnished, include all utilities, and often have vista views, waterfront access, and other amenities that appeal to seasonal visitors.

Owners of short-term rentals carry considerable risk from unmindful tenants, and that risk also tends to drive prices upward. Even so, short-term rentals can be a lucrative business, which unfortunately reduces the availability of twelve-month choices for year-round workers seeking affordable housing choices.

Given that Marquette County has a need to attract construction tradesmen and contractors, its communities might want to consider policies that help manage the short-term rental industry. Alternatively (or, in addition), there may be a need to introduce and fund programs directly targeted at increasing the availability of workforce housing with restrictions on permits for short-term rentals.

Other Real Estate Indicators

Sections 2-E through 2-I

The last steps of the Real Estate Analysis involve studies of units by decade built (Section 2-E); building permit activity (Section 2-F); vacancies by tenure over time (Section 2-G and Section 2-H); and gross rents by number of bedrooms. This section of the narrative report provides some summary observations on each of these topics. In general, they tend to support the conclusions that there is a housing shortage in Marquette County, exacerbated by slowed construction activity and high seasonal occupancy.

Section 2-E Based on the number of units by decade built, Marquette County had its heyday of new housing construction in the 1970's. Over 20% of the county's housing stock was built in that decade, compared to about 5% in the 2010's.

Section 2-F The number of approved housing permits has been declining over the past two decades. Even during the Great Recession and years of recovery (generally 2008 through 2013), there were nearly 100 permits approved in the county annually. Since 2015, that has declined to about 75 units per year. Very few permits have been issued for attached units, with the exception of 30 units in the year 2021.

Section 2-F The average reported investment per unit has increased over the past two decades, from less than \$175,000 per unit following the Great Recession to over \$300,000 per unit in more recent years. The average reported investment into attached units tends to be significantly lower than detached houses, and this is particularly apparent within the combined cities of Marquette, Ishpeming, and Negaunee.

Section 2-G The total number of for-sale vacancies in the county has been declining since 2016, and there were fewer than 200 choices in 2021, representing a vacancy rate of less than one percent (<1%). Although for-lease vacancies also have been declining since 2017, there were 670 available units in 2021, representing a vacancy rate of less than two percent (<2%). These include units that are available, for-lease, or leased but not yet occupied.

Section 2-H The number of vacancies in the City of Marquette that are reported as seasonally, recreationally, or occasionally occupied has decreased since 2018; and seasonal vacancies was reported to total 245 units in 2021. Although seasonal for-lease vacancies throughout all of Marquette County also have declined since 2018, they still exceed an astounding 4,600 units. These units are unavailable, and neither for-sale nor for-lease.

Section 2-I The last section of the Real Estate Analysis summarizes gross rents per bedroom as reported by the U.S. Census' annual American Community Survey (ACS). Unlike contract (cash or net) rent, gross rent usually includes utilities, and it might also include deposits for cleaning fees and pets, plus fees for parking, clubhouses, and other amenities.

In general, gross rents increase with the number of available bedrooms. For Marquette County, the average studio apartment had (in 2021) a gross rent of about \$600 per month, whereas a three-bedroom unit had a gross rent of \$1,175 per month. As a side note, these rents typically have an annual increase of up to +\$50 per month.

. . .
